

#### 4.1

$$\begin{aligned}
 &P(I \text{ always like foreign films} | \text{Pos}) \\
 &= P(I | \text{Pos}) \cdot P(\text{always} | \text{Pos}) \cdot P(\text{like} | \text{Pos}) \cdot P(\text{foreign} | \text{Pos}) \cdot P(\text{films} | \text{Pos}) \\
 &= 0,09 \cdot 0,07 \cdot 0,29 \cdot 0,04 \cdot 0,08 \\
 &= 5,846 \cdot 10^{-6}
 \end{aligned}$$

$$\begin{aligned}
 &P(I \text{ always like foreign films} | \text{neg}) \\
 &= P(I | \text{neg}) \cdot P(\text{always} | \text{neg}) \cdot P(\text{like} | \text{neg}) \cdot P(\text{foreign} | \text{neg}) \cdot P(\text{films} | \text{neg}) \\
 &= 0,16 \cdot 0,06 \cdot 0,06 \cdot 0,15 \cdot 0,11 \\
 &= 9,504 \cdot 10^{-6}
 \end{aligned}$$

$\Rightarrow$  Naive Bayes assign class neg

#### 4.2 Model

	5	
	comedy	action
fun	0,25	1/9
couple	3/16	1/18
love	3/16	1/9
fast	1/8	1/6
furious	1/16	1/6
shoot	1/16	5/18
fly	1/8	1/9

$V = 7$

$$\begin{aligned}
 P(D | \text{comedy}) &= P(\text{fast} | \text{comedy}) \cdot P(\text{couple} | \text{comedy}) \cdot P(\text{shoot} | \text{comedy}) \cdot P(\text{fly} | \text{comedy}) \\
 &= \frac{1}{8} \cdot \frac{3}{16} \cdot \frac{1}{16} \cdot \frac{1}{8} = \frac{3}{16384}
 \end{aligned}$$

$$\begin{aligned}
 \Rightarrow P(\text{comedy} | D) &= P(\text{comedy}) \cdot P(D | \text{comedy}) \\
 &= \frac{3}{40960}
 \end{aligned}$$

$$\begin{aligned}
 P(D | \text{action}) &= P(\text{fast} | \text{action}) \cdot P(\text{couple} | \text{action}) \cdot P(\text{shoot} | \text{action}) \cdot P(\text{fly} | \text{action}) \\
 &= \frac{1}{6} \cdot \frac{1}{18} \cdot \frac{5}{18} \cdot \frac{1}{9} = \frac{5}{17496}
 \end{aligned}$$

$$\begin{aligned}
 \Rightarrow P(\text{action} | D) &= P(\text{action}) \cdot P(D | \text{action}) = 0,6 \cdot \frac{5}{17496} \\
 &= \frac{1}{5832}
 \end{aligned}$$

(We ignore the  $P(D)$  in both equations)

$P(\text{action} | D) > P(\text{comedy} | D) \Rightarrow$  The most likely class for  $D$  is action.
